UV baskı duvar panelleri, yoğun dansiteli EPS ürünlerinin modellenmesi ve üzerine enjeksiyon baskı uygulanması ile yapılmaktadır. Ürün hammadde olarak iç ve dış mantolamada da tercih edilir ve ısı yalıtımına katkı sağladığı gibi ekonomik olması yanısıra özgün tasarımlar ile görsellikte verir. Hayal ettiğiniz ortamı sizlere sunabilecek çeşitlilikteki ürünlerimiz, boyalı boyasız yüzeylerde kolay uygulanabilir şekilde üretilmektedir. Ürünlerimiz strafor özelliğini yitirmediği için kullanıldığı alanlarda daimi izolasyon sağlamakta ve görsel konforu ile de içinizi rahatlatmaktadır.

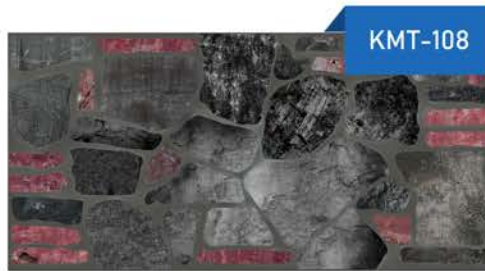

UV printing wall panels are made by modeling high density EPS products and applying injection printing on them.

The product is also preferred as a raw material in interior and exterior sheathing, and it contributes to thermal insulation as well as being economical as well as providing visuality with original designs. Our diverse products, which can offer you the environment you dream of, are produced in a way that can be applied easily on painted unpainted surfaces. Since our products do not lose their styrofoam feature, they provide permanent isolation in the areas where they are used and relax you with their visual comfort.
